

How to create more than one Givebutter account with the same email

Givebutter has a “hack” or technique where users can create multiple Givebutter accounts using a slightly modified version of the same email address by adding "+1" (or any other number) after their username before the "@" symbol, allowing them to essentially create multiple profiles with the same email domain.

ie; sam@gmail.com, sam+1@gmail.com, sam+2@gmail.com, and so on.

All notifications will still go to the original email.

Email provider compatibility:

Not all email providers handle "+1" variations in the same way, so check if your email service supports this feature.
